

I Want That Job! – HVAC Technician

Jason Huber:

My name is Jason Huber. I am an HVAC Technician, and I was an E-4 Specialist in the Army as an M1-A1 Tech. HVAC stands for heating, ventilation, and air conditioning. We maintain and we service any HVAC equipment on a house.

Jason Huber:

Maintenance is normally just to check up on their systems, just to make sure everything else is running properly. And then service is whenever somebody has a no heat or no cool.

Jason Huber:

Now, I have to run possibly three to four calls today. Whenever it's really hot outside, we have a lot more service calls to do. Um, whenever it's really cold outside, we have a lot more service calls to do. It's all weather driven.

Jason Huber:

You have to be, um, EPA certified when dealing with refrigerant. And then you've just got to have some technical background to, uh, work on a system like this. Being in the military, you have to be punctual, hardworking, and a team player. And I use those same skills being an HVAC Technician.

Daphne Frontz:

In 2016, Hiller partnered with our trade school, Total Tech School, to create the Transition to Trades Program. Transition to Trades is a Department of Defense Skilled Bridge Program that allows any military member from any branch of the military to complete on-the-job training, skills training, classroom activity that will help set them up for the civilian workforce.

Jason Huber:

If you love working with your hands, if you love customers, uh, this is a job for you.
